

03-02-02 OBJECTIVE B: FACILITIES

Work with economic development practitioners to encourage sustainable industrial and commercial development that advances the long-term economic and environmental well-being of the state, and is consistent with the State Land Use Policies and Plan, the Industrial Land Use Plan, and other applicable elements of the State Guide Plan.

Policies to Achieve Objective B:

1. Reclaim brownfields by environmental remediation and encourage use of the “built environment.”
2. Conserve and enhance desirable existing industrial areas, office complexes, and concentrations of service activities to maximize the investment and utilization of existing infrastructure. New or expanded public sewer and water services and highways should be provided to industrial and commercial development only where such development is appropriate in terms of the natural constraints imposed by the land, air, and water in the immediate vicinity of such development and vulnerability to natural hazards; and where the area is being developed at an intensity that is consistent with state land use policy, and when such development will not promote wasteful use of resources. When possible, an industry’s needs should be matched with the appropriate site in order to maximize the return on the infrastructure investment.
3. Ensure adequate investment to maintain and improve a balanced, intermodal transportation system that meets the needs of the state’s commerce and labor force. Make the transit system and intermodal connections user-friendly for all members of the riding public. Maintain shipping channels and recognize the economic potential of T. F. Green Airport and other state airports.
4. Encourage higher densities, mixed uses, careful design, transit and pedestrian-friendly land use and development patterns, and location near existing hubs and corridors to avoid “sprawl.” Maximize the use of alternative modes of transportation, such as bicycling, walking, and mass transit.
5. Relate industrial and commercial development to overall land use by promoting the use of development controls and performance standards that mitigate natural hazards and conflicts with other land uses and activities.
6. Encourage investment by the public and private sectors that will stabilize and improve housing and commerce in deteriorating urban areas.
7. Promote the control of land development along arterial highways in order to preserve their functional integrity, capacity, safety, and appearance.
8. Contribute to the stabilization and redevelopment of central business districts through the provision of supporting services such as transportation access, parking, utilities, and police and fire protection, as well as the adaptive reuse of historic buildings that contribute to the commercial and cultural economic base of these areas. Public subsidy enticements to industries other than traded industries should only be considered where they contribute to the stabilization and redevelopment of such areas. Viable economic reuses should be found for historic buildings

that can contribute to the economy. Ensure that all reconstruction and redevelopment meet current natural hazard mitigation criteria.

9. Designate sites in developing communities and in or near smaller urban centers in rural communities for industrial or commercial development as needed to meet state and municipal economic objectives. Select locations with natural characteristics favorable for economic development that have or can be supplied with the public facilities and services necessary to support the type of economic activity planned, and that are readily accessible to a labor force. These locations must also be consistent with the general development patterns set forth in the state land use policies and plan element and with all other applicable elements or provisions of the State Guide Plan. Sites selected, and the economic activities that use these sites, should be compatible with the scale, historic character, disaster preparedness, and other aspects of the surrounding community.

10. Locate industrial development causing other than domestic waste discharges in areas served either by public sewerage systems or by appropriately permitted and maintained private systems.

11. Support agricultural base to include turf, ornamentals, vineyards, forestry, field crops, dairy and livestock. Seek alternative niche markets to support smaller, more diverse farms. Promote the preservation of prime farmland and provide the technical support to keep agriculture environmentally and economically sustainable.

12. Encourage development of sport and commercial fisheries both inshore and offshore up to levels of maximum sustainable yield by supporting the provision of appropriate infrastructure, research and training facilities, aquaculture, management activities, and enforcement of water quality standards. Reserve suitable port access areas for commercial fishing vessels.

13. Encourage new industrial development in the coastal zone that places a priority on the maximum efficient and appropriate utilization of existing marine infrastructure, such as the Port of Providence and Quonset Davisville.

14. Encourage areas used for commercial development to be selected and configured to make the most efficient use of scarce shoreline locations.

15. Promote tourism as a major industry, and encourage and support the use of the wide range of facilities that make up the industry's infrastructure.

16. Encourage the reuse of industrial land as industrial land to the maximum extent feasible.

17. Note areas most vulnerable to natural hazards and locate development away from these areas whenever possible. Provide appropriate mitigating measures wherever such hazards exist.
